

Application of: John E. Johnson
Serial No.: 10/604,306
Amendment C

Amendments to the specification:

Please amend paragraph [0040] as follows:

[0040] However, an air-mixing valve with the liquid jet head can be utilized for a combination fluid of liquid and gas (such as standard air). High-pressure tubing in communication with a vacuum pump can be utilized to deliver a high pressure fluid to a nozzle attached to one end and in fluid communication with the tubing. The nozzle can provide one or more jet streams of fluid and the nozzle streams can be rotating or non rotating. Various nozzle designs can be used to get the desired spray pattern. This along with a good vacuum could eliminate/reduce the added liquid. Refer to Fig. 2A, item 204.

No new matter is added.
